Asset Management, Inc.

2010 Outlook

During the second quarter of 2010, we recognized a shift in the complexion of the domestic equity market. Investors became increasingly concerned about the possibility of a sluggish recovery only two months after the majority of investors had dismissed this scenario. While the United States is in the midst of a multiple quarter economic recovery, leading economic indicators are beginning to show signs of a slowdown. Unemployment claims, the ISM index, new home sales, and consumer confidence have been among the most prominent indicators to lose steam and raise concerns about the possibility of a double dip recession, precipitating a correction that caused the S&P 500 to decline by more than 11%. We are beginning to see a change in market leadership from stocks with high growth expectations, expensive cyclicality, and high beta to previously overlooked high-quality, low leverage companies which have historically prospered in difficult economic environments. At present, companies exhibiting these characteristics have both relatively and absolutely inexpensive valuations. We expect these securities to assume a position of strong market leadership in the coming quarters.

Investor expectations heading into 2010 were ahead of reality, resulting in a correction phase for the market. Sectors, industries, and companies which are the most leveraged to a strong economy should lag as earnings expectations are readjusted. Meanwhile, high quality and defensive companies, which have underperformed in the past twelve months, should experience relative outperformance. HGK has been and continues to be defensively positioned, emphasizing companies and industries which are less dependent on economic growth and consumer spending. Larger, high quality securities with strong balance sheets and low leverage are attractively valued, pricing in conservative expectations. The inherent strength of these types of companies will enable them to gain a competitive advantage versus financially weaker companies. They will have the ability to access capital, undertake expansion, and supplement their organic growth through acquisition. HGK favors the Consumer Staples, Healthcare and Utilities sectors. All three sectors are supported by attractive valuations and dividend yields, relatively inelastic demand, and low correlation to a weak economy.
